

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

CHAPTER I

INTRODUCTION

Iloilo City is the regional center of Western Visayas and serves as the hub for trade, commerce, industry, education, religion, healthcare, tourism, culture, and culinary arts. Iloilo is recognized as the first UNESCO Creative City of Gastronomy in the Philippines. It is nicknamed "the Heart of the Philippines".

Technology plays a crucial role in modernizing and improving how information is accessed and shared. Nowadays, people rely on using technology for everything to reduce costs and save time. Many people can benefit from this application because users can find anything and provide information about Iloilo City in one place.

The Iloilo City info app is a mobile application developed and designed to solve this problem by serving as a one-stop digital guide for everything the city has to offer. This app provides necessary information about popular tourist attractions and offers features like Google Maps navigation, real-time updates, and user-friendly interface, it aims to explore Iloilo City efficiently and conveniently. Users can browse, search access, and view the sites not only for must-visit places but also information in local government agencies and services.

This research focuses on the creation and implementation of the Iloilo City Info App, and how it can assist and help the travels of both locals and tourists in Iloilo City. It aims to present or highlight the importance of technology in boosting tourism, support businesses, and to promote Iloilo City's destination.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

Technical Background of the Study

Mobile applications play a major role in promoting cities and providing easy access to information for both locals and tourists. Iloilo City, known for its rich culture, heritage, and growing economy, can greatly benefit from a modern information system that highlights attractions, services, and local businesses. Traditionally, information about the tourist spots, events, and establishments has been scattered across various websites, social media pages, or printed materials. This makes it difficult for users to find reliable and updated information quickly.

A Iloilo City Info App aims to solve this problem by developing an easy-to-use, user-friendly, and interactive mobile platform that provides complete information about the city's attractions, hotels, restaurants, government offices, and cultural sites. Key technologies involved in such systems include:

1. **Database:** A database used to store and manage all information such as tourist spots, restaurants, hotels, events, and user data that can easily retrieve and update data.
2. **Mobile Applications:** Mobile devices and apps allow info app management to be done on the go, enhancing flexibility and improving workforce productivity.
3. **Data Analytics:** Using analytics tools, the system can predict inventory needs, track product movement, and provide actionable insights. These insights can help

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

businesses make informed decisions on stock levels, reduce waste, and prevent stock outs or overstocking.

4. **UI/ UX:** The app is designed with a clean and simple interface, making it easy for users to explore categories, search for information, and view detailed pages.
5. **Content Management and Admin Panel:** An admin dashboard allows administrators to add, edit, or delete information about places, events, services, and businesses to make content up-to-date.
6. **Search Management :**Users can search for specific places, or services.
7. **Google Maps Integration:** The app integrates mapping services to show exact locations, and directions that helps users easily navigate around Iloilo City.
8. **Real-Time Update System:** A real-time communication service is integrated into the app to deliver instant alerts about news events,city announcements and important updates.

STATEMENT OF THE PROBLEM

Tourists and locals in Iloilo city often face challenges in finding the best places to visit, such as beaches, hotels, and restaurants due to the lack of a reliable platform for recommendation. People need to physically visit the exact place to gather information they need, which can be a waste of time and cost of travel. Many existing websites provide incomplete and outdated information, which can make people confused and doubt what they see on the internet, especially in location and details. Iloilo city residents struggle on local information or documents that they need to gather or want to process, where they need to go from one place to another especially in getting requirements. Many people find it difficult to collect accurate

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

information about city events, places, locating hotels, accommodations, businesses, and government services.

OBJECTIVES OF THE STUDY

The main objectives of this research are to develop, design, and implement an Iloilo City Info App for both tourists, and locals.

Specifically, this research aims to:

- To develop a mobile application that provides accurate and updated information about Iloilo City's tourist attractions, accommodations, restaurants, historical and cultural landmarks, local businesses, and government services.
- To create a user-friendly mobile application that is easy to access for the users to essential information they need about Iloilo City.
- To ensure real-time updates for the app that allows users to stay informed of the latest information on events, services, and changes in the city.
- To integrate with Google Maps to help users in locating tourist sites, government agencies, local business, and accommodations.
- To promote the local business through this platform wherein they can showcase their products, and services and to boost the local economy.
- To enhance the tourist experience by providing both locals and tourists with a one-stop app for planning their trips and activities.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

SIGNIFICANCE OF THE STUDY

This project is an Iloilo city Info App: A mobile application to promote Iloilo city's significance and make it easier for both locals and visitors to find helpful and accurate information about Iloilo city. The app brings everything into one place, making it convenient for many people. This study benefits various people:

1. **Tourists:** They will benefit from the app by easily accessing information about the city's attractions, restaurants, beaches, and transportations.
2. **Residents:** The system will benefit the locals by providing them quick access to city services, updates on events and information for processing documents and local businesses.
3. **City Government:** They will benefit from the app by sharing news, events, and other important public information with locals and tourists. It will help them to communicate better with people of Iloilo city and promote tourists.
4. **Future Researcher:** The research can serve as a reference for future researchers to help them with related topics like tourism, historical landmarks and city's establishment.
5. **Local Businesses:** Being listed in the app helps local businesses reach a larger audience, including residents and tourists who might not be aware of their establishment.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

6. **Proponents:** We are the team who created the Iloilo city info app, our goal is to provide an accessible and connected platform for both locals and tourists.

SCOPE OF THE STUDY

The Iloilo City Info App is developed to help tourists and locals explore Iloilo City by providing updated and accurate information. The application aims to promote tourism, local businesses, and the city's culture and history.

The application's key features are:

- List of the tourist attractions, hotels and accommodations, restaurants, resorts and beaches, cultural and historical landmarks, businesses, and government services in Iloilo City.
- Active connections to maps and navigation to help the users in finding locations.
- Updates on City's local events, festivals, and other activities.
- Faster way to find the specific places or services using the search function.
- Offline access to the city's basic information for the users who are in places that have limited access on the internet.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

LIMITATIONS OF THE STUDY

While the Iloilo City Info App offers these features, there are limitations that needed to be addressed:

- This research will focus only on the Iloilo City tourist attractions, hotels, restaurants, cultural and historical landmarks, local businesses, and government services.
- The application is only using the English language.
- The search functionality is limited for the specific words or phrases.
- Internet connection is needed for using the app because of the Google Map.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

DEFINITION OF TERMS

1. **Iloilo City Info App** - A mobile application designed to promote Iloilo City by providing comprehensive information about its tourist attractions, culture, businesses, events, accommodations, and local services.
2. **Tourism Promotion** - The process of encouraging travel and visitation to Iloilo City by showcasing its landmarks, festivals, heritage sites, and local experiences through the mobile app.
3. **User Interface (UI)** - The visual design and layout of the app that users interact with, including buttons, menus, icons, and navigation features to ensure ease of use.
4. **User Experience (UX)** - The overall experience and satisfaction of users when interacting with the app, focusing on accessibility, usability, and efficiency.
5. **Database Management System (DBMS)** - A system used to store, organize, and manage all information displayed in the app, such as tourist spots, hotels, restaurants, and local businesses.
6. **Geo-location Services** - A feature that uses GPS technology to identify and display the user's current location, as well as nearby attractions and establishments within Iloilo City.
7. **Interactive Map** - A digital map integrated into the app that allows users to explore Iloilo City's locations, view routes, and get directions to various destinations.
8. **Business Listings** - A feature that displays registered local businesses such as hotels, restaurants, malls, and service providers, including details like address, contact information, and operating hours.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

9. **Cultural Heritage** - Refers to Iloilo City's historical and cultural assets, such as landmarks, festivals, traditions, and architecture, which are featured in the app to promote local identity.
10. **Mobile Application** - A software program designed to operate on mobile devices such as smartphones and tablets, enabling users to access information anytime and anywhere.
11. **Admin Panel** - The backend system that allows administrators to manage app content, update information, approve business submissions, and monitor user activity.
12. **Dynamic Content** - Information within the app that updates automatically from the database, ensuring users always receive current and accurate data.
13. **Navigation Menu** - The part of the app that helps users easily move between sections such as Tourist Spots, Restaurants, Hotels, and Events.
14. **User Engagement** - The level of interaction and participation of users within the app, such as viewing listings, leaving reviews, or sharing locations.
15. **Responsive Design** - A design approach ensuring the app adjusts smoothly across different screen sizes and devices for consistent performance.
16. **Search Functionality** - A tool that enables users to find specific places or information quickly within the app using keywords or categories.
17. **Local Business Promotion** - A feature of the app that highlights and supports Iloilo-based entrepreneurs by showcasing their products and services to potential customers.
18. **Tourist Spots** - Popular destinations in Iloilo City featured in the app, such as historical sites, beaches, parks, and cultural landmarks.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

CHAPTER II

REVIEW OF RELATED LITERATURE

This chapter presents existing and literature related to Iloilo City Info App. It discusses the tourism mobile applications, smart city technologies, and digital information systems that promote tourism and local business. The review supports the development of an Iloilo City Info App to improve travel experiences, promoting local destinations, and strengthening city management systems.

Elevating Philippine tourism: A mobile app approach.

According to Velasco et al. (2024), tourism plays a major role in boosting a country's economy by generating employment and promoting various products and services. With the rapid growth of digital technology, tourism has transformed into e-tourism, where tourists rely on mobile apps and online platforms to organize trips, book accommodations, and discover destinations. The study emphasized that mobile apps make travel more convenient and enhance the overall experience by providing real-time updates, maps, and booking features.

Smart Tourism and Smart Cities

The study also aimed to make San Pablo City, Laguna a smart city using an e-tourism mobile app. By integrating smart technologies it allows the city government to connect their tourism, business, and public services into a single digital platform. It provides tourists location-based suggestions and real-time updates on traffic and events.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

User-Centered Design and Human-Computer Interaction(HCI)

In the e-tourism app created by Velasco et al. (2024), the researchers applied Human-Computer Interaction (HCI) principles to create an interface that is user-friendly and works well on different devices. They used an iterative design process, improving the app based on user feedback to ensure a smooth and friendly experience for both locals and tourists.

Benefits of Iloilo City Info App

Implementing an Iloilo City Info App improves tourism promotion and makes city information easier to access. Velasco et al.(2024) stated that mobile tourism app enhance user engagement and support smart city development through real-time services(p.126).

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

CHAPTER III

METHODOLOGY

This chapter outlines the research methodology that will explain the development of the "Iloilo City Info App: A Mobile Application to Promote Iloilo City". The primary goal of this research is to develop and design a user-friendly application that provides detailed information of Iloilo City. This chapter will also detail the research design, the model use, data flow diagram, and the entity relation diagram that will be used to achieve the objectives.

The research will follow a systematic and structured approach to guide the design, development, and evaluation of the Iloilo City Info App. The process will begin with a review of existing tourism and city guide applications to identify current trends, best practices, and limitations. Based on the review, the methodology will proceed with the design phase, the features, layout, and functionality of the system to meet the specific needs of both locals and tourists in Iloilo City.

To gather valuable insignia on user requirements and expectations, surveys and questionnaires will be conducted with key respondents. These respondents will play a crucial role in providing the necessary data for the system's design and functionality. Their feedback will guide the development process, ensuring the system meets the practical needs of users.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

Once the system is developed, it will undergo testing and evaluation to ensure its accuracy, usability, efficiency, and overall performance. This chapter will provide a clear understanding of the research methods and processes that will guide the study, ensuring that the project is executed in a structured and effective manner, leading to an informative mobile application that contributes to the promotion of Iloilo City's tourism and government sectors.

Research and Development Stage

The research design for Iloilo City Info App: A Mobile Application to Promote Iloilo City follows a **quantitative research design**. The quantitative research aspect focuses on collecting numerical data and measurable information about Iloilo City's tourism, businesses, and government services to determine the essential features needed for the mobile application.

The research will gather data through surveys distributed to tourists and locals to identify their challenges in accessing information. It will explore how a mobile application can make information easier and convenient for users. This includes reviewing secondary data from existing studies, online sources, and government resources to ensure the accuracy and relevance of the information included in the app. This approach ensures that the app meets the needs of both tourists and locals by providing real-time updates, a user-friendly interface, and an accessible platform for exploring Iloilo City.

MODEL USE

Figure 1.1: SDLC Methodology

The study uses the Software Development Life Cycle (SDLC) Model for the Iloilo City Info App because it is flexible and allows for continuous improvements and testing based on user experience. This helps make sure the app meets the needs of its users. The development follows these phases:

- 1. Planning and Requirements Analysis** - This phase defines the main goal of the Iloilo City Info app – to promote Iloilo City's tourism, culture, and local businesses. It identifies key stakeholders such as the city tourism office, local businesses, tourists, and locals. It also involves gathering requirements and planning core features, including details on tourist spots, events,

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

hotels, food places, transportation, emergency services, businesses, and real-time updates based on user needs.

2. **Design** - To make the app user-friendly, we design its layout during this phase. We create buttons, categories, and maps that help users find what they're looking for easily. Iloilo City's culture and style are reflected in the app's design, which makes it visually appealing and easy to use.
3. **Development** - This is the stage where the team starts building the app. The team writes the code and creates a database to store important information about Iloilo City, like tourist spots, hotels, restaurants, and services. Helpful features like maps and directions are added to guide users around the city. During this part, we make sure everything works well and that the app is easy for everyone to use.
4. **Testing** - We ensure the app functions and navigations properly, smoothly, especially the maps, and flow of the system that can meet usability standards before launching the app. User testing is performed to evaluate the ease of navigation, efficiency of information retrieval, and responsiveness. We test the app to make sure it is user-friendly and to solve any potential problems. We make sure that it is accessible for everyone and functions properly on multiple devices.
5. **Deployment** - This is the stage where the fully developed and tested Iloilo City Info App is officially released and made available for users. During this phase, the team

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

ensures that the application works properly, runs smoothly, and is secure for everyone to use. This marks the transition of the Iloilo City Info App into real-world use, allowing both tourists and locals to easily access accurate and updated information about Iloilo City anytime and anywhere.

6. **Maintenance** - This phase ensures that the Iloilo City Info app remains secured, functional, and always updated. Regular monitoring and updates are done to fix errors, improve performance, and add new features based on the user feedback. This includes updating details about tourists attractions, events, and local businesses. The app is regularly checked to ensure it stays secured and runs well on different devices. Maintenance helps the app stay reliable, useful and easy to use for everyone.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

Surveys

Surveys were the main method used to collect data from many people such as residents, tourists, business owners, and tourism officials. The survey questions asked about users' preferences, travel habits, and what they want in a city information app.

The answers helped identify which features are most important to include in the Iloilo City Info App.

Justification for Selecting the Agile and Iterative Models

The decision to adopt Agile over other SDLC models, such as Iterative, was based on several critical factors:

Criteria	Agile Model	Iterative Model
Flexibility	Very high - allows changes anytime during development	High - changes can be made in the next version
User Involvement	Continuous feedback during each sprint	Feedback given after each version
Development Approach	Sprint-based, small working features delivered often	Cycle-based, each version improves the previous one
Testing and Evaluation	After every sprint to check quality	After every version to make improvements
Risk Management	Problems found and fixed early	Risks reduced by regular testing and updates
Delivery Output	Quick delivery of working parts	Stable version after each cycle with better performance

System Architecture and Design

3.1 OVERVIEW

The study Iloilo City Info App: A Mobile Application to Promote Iloilo City aims to develop a user-friendly, and comprehensive digital platform that provides necessary and up-to-date information about Iloilo City for both tourists and locals. Most people, either young or old have smartphones today that becomes every individual life it becomes suitable to useful mobile application which is easy access and make ones like better. Many studies show that mobile applications make travel easier and efficient by providing instant access to information, directions, and recommendations.

Providing accurate and up-to-date information, including Google Maps for locations, promoting local's business, and improving the tourist experience are the goals of this study. By gathering information into a single digital platform, the application serves as a one-stop guide that improves accessibility especially for tourists, locals, businesses, and the city government.

3.2 System Architecture

The system architecture is divided into three main layers:

- **Presentation Layer:** Includes user interfaces like web or mobile apps for Iloilo City info app. Also includes navigation menus, search functions, maps, and displays of attractions, services, and events.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

- **Application Layer:** The backend logic that handles data processing, user login, content updates, and the connection between the app and the database.
- **Data Layer:** Includes the database where all data records such as attractions and services details, event schedules, user feedback, and photos are stored.

Diagram:

Include a **System Architecture Diagram** showing components like:

- Info App database
- Web/mobile application
- GPS and Map Integration (Google Maps Embed Link)
- Web-based Admin dashboard

3.3 System Components and Modules

The Iloilo City Info App is composed of several functional modules that work together to share information efficiently, and in an easy , interactive way. Common modules in a Iloilo City Info App system include:

3.3.1 Tourist Information Module

Provides detailed information about tourist attractions, cultural and historical sites, events, and activities in Iloilo City.

3.3.2 Map and Navigation Module

Uses Google Maps services to guide users to their chosen destinations with real-time directions.

3.3.3 User Interaction Module

Allows users to write feedback, inquiry, and request services.

3.3.4 Admin Management Module

Allows admins or tourism officers manage app contents to add, edit, or delete attractions, events, services, and announcements.

3.3.5 Reporting and Analytics Module

Tracks how many users used the app, visits, count searches, and business listings.

Use Case Diagram

PHINMA UNIVERSITY OF ILOILO

Data Flow Diagram

Figure 1.3: Level 0 DFD of Iloilo City Info App

Figure 1.4: Level 1 DFD of Iloilo City Info App

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

The Data Flow Diagram (DFD) and Use Case Diagram play crucial roles in understanding and designing the Iloilo City Info App. The Use Case Diagram outlines the system's functions by identifying the interactions between users and administrators in app's features. In contrast, the DFD provides a more detailed view of how data flow within the system, including how data is collected, processed, stored, and displayed to users. Together, these diagrams provide a complete understanding of the system's structure and operation while the Use Case Diagram explains what the system does, the DFD explains how it processes and manages data to deliver accurate information. Their combination helps ensure that the system is organized, easy to use, and user-friendly.

Database Design

Key tables may include:

- User
- Categories
- Popular
- Transportations
- Services
- Announcements
- Contacts
- Businesses

User Interface Design

The Iloilo City Info App uses a simple, user-friendly, and responsive interface designed for both locals and tourists. The design follows a clean layout with clear icons, soft colors, and easy navigation. The users can quickly find places, view details, and explore categories.

Security Considerations

Discuss any **security mechanisms** implemented, such as:

- User authentication
- Admin Authentication
- Session Management

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

- Role-based access control
- Data encryption
- Secure API endpoints
- Secure File Uploads
- Data Security

Technology Stack

List all the tools, platforms, and technologies used in the development:

- **Frontend:** HTML/CSS.
- **Backend:** PHP, JavaScript.
- **Database:** MySQL
- **Additional Tools and Platforms:** Lucid Chart, Visual Studio Code (VS Code)

Data Gathering techniques

Survey Questionnaire for System Assessment

The following survey is designed to gather feedback from users about their experience using the "Iloilo City Info App". The data collected from this survey will help in designing a system that meets the needs of users and help users easily find information about tourist and local places, businesses, and services in Iloilo City. Please answer the following questions as honestly and accurately as possible.

Sampling Methods for Respondents

The respondents for this survey will be selected using **stratified sampling** to validate that all key groups of Iloilo City Info App are well-represented. The sampling will be done in the following steps:

1. **Define Strata:** The respondents will be grouped into different strata based on their role or type of app user: locals(residents of Iloilo City), tourist/visitors(domestic and international), business owners(restaurants, hotels, malls, cultural sites, etc.),and government officials.
2. **Sampling Within Strata:** Random sampling will then be used to select participants from each group.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

3. **Sample Size:** The total number of survey respondents will be determined based on the project's requirements, ensuring a statistically significant sample size to draw valid conclusions. The ideal number of respondents will be at least 10 for each group.
4. **Survey Distribution:** The survey will be distributed using Google Forms, ensuring easy access for all respondents, and will be shared via email, social media, or direct contact with businesses involved in Iloilo City Info App.

Compliance with data privacy laws and ethical standards

- All participants were informed about the purpose of the study and how their responses would be used. Their participation was voluntary, and they could withdraw anytime. Personal details were not collected unless required and all answers were kept private and anonymous. We ensured that our study followed the Data Privacy Act of 2012 (Republic Act No. 10173) and all other relevant ethical guidelines.

Protection of participant information

- All gathered data were securely stored and used only for academic purposes. We ensured that no information was shared or disclosed to anyone outside the research group. In presenting the result, only summarized data were shown, ensuring that individual responses remained confidential.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

CHAPTER IV

RESULTS AND DISCUSSION

This chapter presents the outcomes of the development and testing phases of the Iloilo City Info App. It interprets the main findings and assesses whether the application meets its intended objectives, such as delivering accurate information about the city, and improving accessibility, user-friendly information about Iloilo City's tourism, local businesses, government services, and cultural sites. The results are based on the system performance, user feedback, and data analysis gathered during testing and implementations. This chapter also reflects on how the app addresses the challenges identified in earlier chapters and contributes to the overall goals of the project.

Summary of the data sources and analysis methods used

The data used for analysis in this study was gathered through various sources, including user interaction logs, app usage statistics, and feedback collected during testing sessions. Primary data sources include the Iloilo City Info App backend database, which records user activity such as searches, page visits, category views, and user visits. Supplementary data were gathered through surveys and discussions with key respondents, including tourists, local residents, business owners, and government officials, to gain insights into the app's usability, accessibility, and effectiveness.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

For analysis, quantitative methods were applied to evaluate the Iloilo City Info App. Data collected from surveys were categorized and interpreted to assess user satisfaction, app usability, accessibility, and overall experience. Feedback was analyzed to identify strengths, challenges, and areas for improvement in the app's features, navigation, and content. This approach provided a clear understanding of how effectively the Iloilo City Info App meets the needs of its users and supports the promotion of tourism, local businesses, and city services.

Presentation of Results

The Iloilo City Info App was developed, tested, and evaluated to determine its effectiveness in improving information easier to access, updates, and reducing manual errors. System performance, usability, and user satisfaction focus on its accuracy, speed, and overall efficiency. After implementation, results were gathered through system performance tests, user testing, and data analysis from the database. The system was assessed on accuracy, speed, and user satisfaction.

Features of the system/app

The Iloilo City Info App was developed to promote tourism, culture, and public services in Iloilo City. Its key features include:

- 1. Tourist Guide** - Provide details about Iloilo City's attractions, historical landmarks, cultural places, local cuisine, and Iloilo City Tour Itinerary including pictures, location, and other details.
- 2. Business Directory** - List of businesses in Iloilo City like local shops with names, services, contact information, locations, websites, and GPS guide.
- 3. News & Events** - Deliver and show up-to-date local news, city events, and upcoming city activities.
- 4. Transportations** - Provides real-time information of jeepney and bus name, routes, fare, and GPS guide to help users navigate the public transport.
- 5. Emergency Services** - Lets users have quick access to information of police stations, fire stations, Coastguard details, and hotlines of hospitals, medical, and other emergency information.
- 6. Search Functionality** - search bar for places, services, or categories.
- 7. User-friendly Interface** - Ensure the app with simple, clean, and clear organization of information that helps users.
- 8. Contact Details** - Let users send messages, complaints, feedback, and requests.

CHAPTER V

SUMMARY, CONCLUSION, AND RECOMMENDATION

Summary

The study aims to design and develop a Iloilo City Info: A Mobile Application to Promote Iloilo City, that provides easy access to information about tourist attractions, restaurants, hotels, malls, government services, and cultural sites. The app features search functionality, tourist guide details, transportations, news and events information, business directory, emergency information, user-friendly interface, contact details, and offline access, to make it easier for residents and tourists to explore Iloilo City more conveniently and efficiently in one stop app.

The development followed a structured approach, including requirement analysis, system design, development, testing, and evaluation. Results showed that users could find information faster and easier, with improved convenience and satisfaction. The app successfully achieves its objectives and proves to be an effective digital guide solution for exploring and learning about Iloilo City in one application.

CONCLUSION

Based on the findings, the Iloilo City Info App is a helpful tool that gives easy access to important information for both tourists and residents. It helps promote the city's tourism, supports local businesses, and gives users quick access to government services. The app is easy to use and has useful features that make exploring Iloilo City more convenient and enjoyable.

The system also Includes some features like real-time updates, Google Maps, and offline access to some available details, users can get the information they need anytime, anywhere. The app shows how technology can help people connect with the city and enjoy their visit or stay in Iloilo City.

RECOMMENDATION

Based on the findings from the Iloilo City Info App project, here are some simple recommendations for future improvements:

1. **Improve Search Functionality** - Make the search bar smarter by allowing it to suggest results as users type. This will help users find what they are looking for more easily.
2. **Add Multilingual Support** - Include options for different languages, especially local dialects which is Hiligaynon. This will make the app more accessible to a wider audience, including tourists who may not speak English.
3. **Enhance Offline Access** - Allow users to download important information for offline use. This will help those in areas with poor internet connections.
4. **User Reviews and Ratings** - Add a feature that lets users leave reviews and ratings for attractions and businesses. This will help others make better choices based on real experiences.
5. **Regular Content Updates** - Set up a system for regular updates to ensure that all information remains current and accurate.
6. **Alert Notifications** - Sending notifications, or messages of city new updates of Iloilo City information.
7. **Gather User Feedback** - Regularly ask users for their opinions and suggestions. This will help improve the app based on what users really want.
