MODEL USE

Figure1: Agile Methodology

The study utilize Agile Development Model for the Iloilo City Info App because it is flexible and allows for continuous improvements and testing based on user experience. This helps make sure the app meets the needs of its users. The development follows these phases:

1. **Planning** - This phase involves identifying the key features and requirements of the app. We make a list and gather information of all the important features to ensure that the app includes all functionalities, such as information about Iloilo City, tourist spots, events, hotels, food places, transportation, emergency services, businesses, and real-time updates. We also research what users need and create a plan for how to build the app.
2. **Design** - To make the app user-friendly, we design its layout during this phase. We create buttons, categories, and maps that help users find what they're looking for easily. Iloilo
